SPACE STATION SCIENCE

Second Edition (with new photos, updated text & art)

By **MARIANNE J. DYSON**

Illustrated by Dave Klug

Now Available in Paperback from Windward Publishing!

Reviews of First Edition:

"A must read for future space station scientists!"
Apollo 11 astronaut **Buzz Aldrin**

"The precisely written text, illustrated with many full-color photos, leads readers to imagine life in orbit and to do a number of simple experiments related to space flight. A glossary and a list of organizations and Web sites concludes this inviting and informative volume."
Carolyn Phelan, Booklist (American Library Association), Nov. 15, 1999.

"An excellent book about the science of free-fall and space, written for kids, but interesting for adults as well." Nebula and Hugo-award winning writer and physicist **Geoffrey Landis** (Amazon.com review).

"Artfully mixing big questions ("If people stayed in space, would they end up as blobs?") with well-chosen scientific and personal details, Dyson at once excites and informs young readers. Clever, low-tech demonstrations and experiments elucidate physical principles... with the upcoming construction of the International Space Station, this consciousness raiser couldn't be better timed. **John Peters**, New York Public Library (**School Library Journal**, Dec., 1999)

The Golden Kite Award is the only award presented to children's book authors and artists by their fellow authors and artists who are members of the Society of Children's Book Writers and Illustrators. The works chosen are those that the judges feel exhibit excellence in writing and genuinely appeal to the interests and concerns of children. (www.scbwi.org)
